The following is an examiner's statement of reasons for allowance: Claims 1-13 and 15-17 are allowed over the closest reference, Nagy *et al.* (U.S. Patent No. 6,232,260).

The present invention is drawn to a process comprising polymerizing an olefin in the presence of an activator and a group 3-10 organometallic complex containing at least one indenoindolyl ligand bound to the metal center wherein a C<sub>2</sub>-C<sub>30</sub> radical containing a S, O, N, or P atom is bound directly to the indole nitrogen (see claim for structure).

Nagy *et al.* teaches olefin polymerization in the presence of a catalyst comprised of an activator and a group 3-10 organometallic complex containing at least one indenoindolyl ligand bonded to the metal wherein any of the ring atoms of the indenoindolyl ligand is substituted with one or more substituents such as nitro (NO<sub>2</sub>), dialkylamino (NR<sub>2</sub>), diarylamino (NAr<sub>2</sub>), alkoxy (RO), aryloxy (ArO), or thioether (RS) groups. The reference does not teach the claimed subject matter because there is no disclosure of suggestion to replace the substituents described therein with a C<sub>2</sub>-C<sub>30</sub> radical containing a S, O, N, or P atom.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
